

BCS for document archiving

WHAT is ZEENDOC?

We deliver a "Turn-key" capture, index and archive solution, rapidly available, with no technical knowledge required to use it.

Your End-Users in the office, on the road or by «home office» have access to their repository documents through a simple internet connection.

One document repository for your company

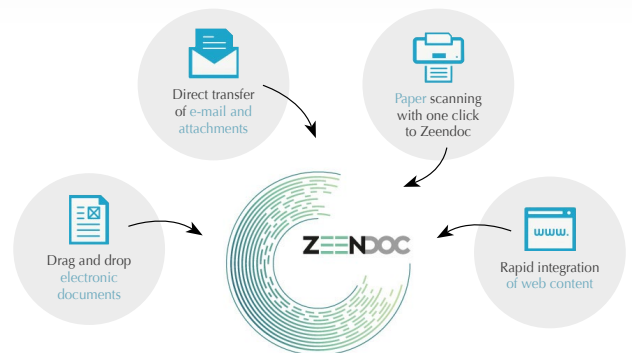

With **Zeendoc**, your document database is homogeneous: Email, computer files, paper documents are always available and searchable in a standard format (pdf or flash) making the search fast and effective in seconds.

The original document is safely stored and retrievable at any time in its original version.

Business Cloud Services (BCS) for **Zeendoc** is the AGENTIL Swiss Cloud solution, hosted at IBM Geneva datacenter.

Swiss law and data protection compliance.

Deposit in a CLICK

With **Zeendoc**, regardless of the source or format of your document, just click to place it in your document repository.

Moving your paper archives to ELECTRONIC documents

Digitizing an archive database is more complex than simply passing paper in a scanner.. What document to scan? How to classify them? How to organize them to avoid disrupting the activity and business of the company?

Our experience of document scanning and archiving allow us to provide an audit of the existing situation at your place and to propose a customized way to manage your physical archives

through our network of specialized partners. We have the right tools and methodology to dematerialize your document database very efficiently but adapted to your environment and your requirements. We can index your documents so that they are quickly retrievable and seamlessly integrated in your global **Zeendoc** repository.
