

# SAP Document Design

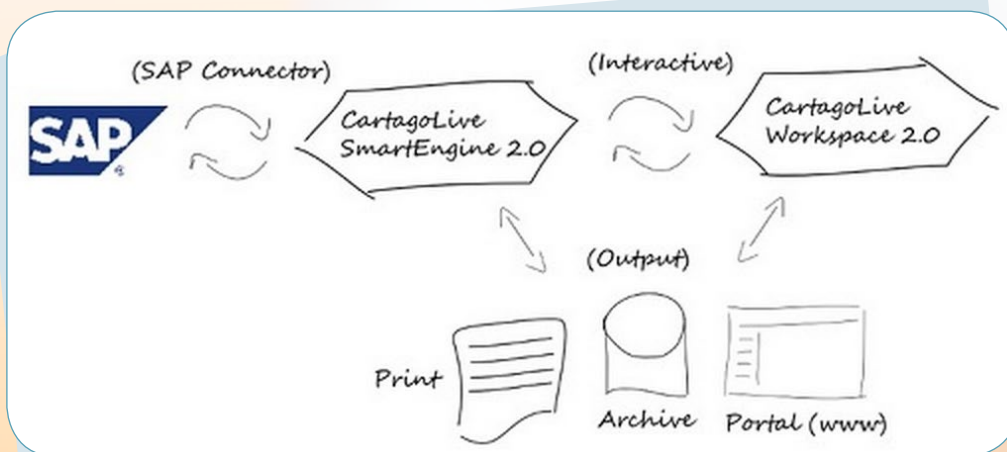

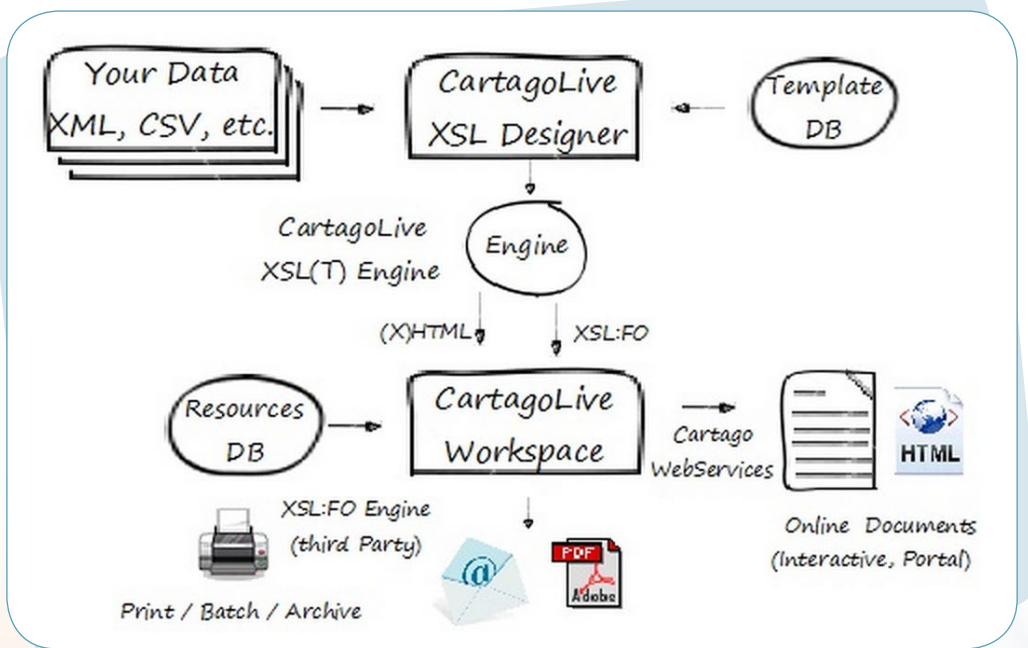

## WYSIWYG Stylesheet Designer for XML / XSL documents

**It covers data or preformatted documents acquisition from your application in order to enhance them and make them compliant with the company graphical guideline.**

- > Manage documents mass production composition
- > Document generation from any application
- > Take care of interactive document composition in order to create correspondence, predefined text blocs

> Allow on demand composition in order to present on the Web a contract based on a form, filled by, Cartago CSdesigner. Use CEngine for document formatting and COutputcenter for print dataflow generation. Cartago solution is based on W3C standards and best of breed technologies

## CSDESIGNER

Cartago designer is a wysivyg tool based on Java to design document composition templates ; it can import MS Word documents to be used as design templates.

## CSENGINE

CSEngine formats the documents based on the rules and templates designed using CSdesigner ; the XML data in input are used to produce XSL:FO data flow in output.

## CSOUTPUTCENTER

CSoutputcenter takes the XSL :FO in input and generate the necessary output format based on the delivery channel (print, email, archive, web publishing..) : PDF, PCL, PS, AFP...
