

Back up As A Service

WHAT is Back up As A Service (BAAS)?

Is your backup service simple and cost-effective?

Backing up and recovering data is a necessary discipline in all organizations but often considered costly, cumbersome and difficult to manage.

Most backup problems happen overnight, when you don't have people watching them, meaning the backup window impacts production time and puts the business at

Backup on demand

- > All our customers are different, so we provide corresponding storage capacities for each need
- > Our aim is to free up your IT team and ensure backups do not impact production time
- > We are responsible for backup success (with adapted SLA's), ensuring your recovery time
- > AGENTIL is responsible for recovering your data in due time with no loss
- > You pay for what you use, based on a monthly fee
