

SAP SECURITY MONITORING SERVICES **Onapsis Security Platform**

24x7 SAP Security Monitoring Secure your SAP system against the latest threats

- > Analysis of unsafe configurations of technical parameters (ABAP & Java)
- > Discovery of missing SAP security patches
- > Detection of unsecure interfaces between SAP components
- > Reveal unsecure SAP Mobile deployments
- > Exposure of users with risky technical authorizations
- > 24x7 Monitoring, 12 months contract minimum

How does it **work?**

- > Onapsis OSP is installed in a regular Windows SAP system by our audit team
- > It automatically discovers the SAP systems in your network
- > We select the type of assessment to perform:
 - Vulnerability Assessment
 - Audit
- > You select the scan policy to use (SAP Security Guidelines, PCI, SOX, NERC, Custom, etc)
- > We launch the scan or schedule it for immediate results
- > We setup the SAP security monitoring services to run everyday
- > Onapsis OSP connects to your entire SAP platforms and downplay user critical behavior
- > Results are presented through different reports, describing detected issues and mitigation activities. We provide SAP security monitoring services for a minimum period of 12 months

SAP® Certified
Powered by SAP NetWeaver®

MORE security

- > Bring visibility into the security of your SAP business applications
- > Perform comprehensive security services, assessments, penetration testing and security audits against business critical systems
- > Reports risks and compliance issues as part of a continuous security initiative
- > Integrate into broader compliance processes and regulations
- > Access your SAP security portal for supervision and adaptations

Audit and compliance

- > Quickly gain security insights into the SAP infrastructure
- > Go beyond segregation of duty controls, analyse your SAP risk online
- > Audit the entire business platform landscapes and their dependencies everyday
- > Pre-defined or proprietary audit policies can be leveraged to reduce time and effort
- > Continuous monitoring and benchmarking of audit findings on SAP through our service packages
- > Quickly determine remediation action plans for business related inherent and residual risks
- > Corrective advice, mitigation plans and risks correction
